SUMMARY

Backend-focused Software Engineer with nearly 4 years building production systems in **Node.js, TypeScript and PostgreSQL**, most recently high-volume payment and financial systems. Owned Stripe, Airwallex and NetSuite integrations end to end at a B2B marketplace processing **20,000+ payments a week across 10+ currencies in 70+ countries**, handling concurrency, idempotency and performance under load. Built automated reconciliation from scratch and moved payment processing into an event-driven microservice on Kafka. Uses AI-assisted development daily and works asynchronously in fully remote, distributed teams alongside product, finance and operations.

WORK EXPERIENCE

Software Engineer II | Nivoda

Nov 2023 – May 2026

B2B diamond and gemstone marketplace connecting 10,000+ retailers across 70+ countries.

- **Optimised systems for large transaction volumes** — 20,000+ payments a week across 10+ currencies — handling concurrency, idempotency and performance under load in a 24/7 production environment.
- **Built and shipped APIs in Node.js and TypeScript**, including input validation, JWT-based authentication and queue-based processing for security and scalability.
- **PostgreSQL at depth**: designed schemas for large financial datasets (invoices, payments, balances, callbacks), optimised slow queries and ran data migrations with zero-downtime requirements.
- **Moved payment processing out of the monolith into an event-driven microservice on Kafka**, publishing payment events to invoice and order services for asynchronous updates, callbacks and downstream processing.
- **Built automated reconciliation from scratch**, replacing a fully manual process; a second version settled single payments across multiple invoices and partial payments, automating around 70–80% of reconciliation.
- Owned Stripe, Airwallex and NetSuite integrations end to end — webhook idempotency, retries, partial refunds, multi-currency capture and settlement timing; rolled out Stripe in the UAE and Saudi Arabia, adding hundreds of payments a day.
- **Improved observability** with Datadog monitoring and Slack alerting on payment services, plus a review dashboard and alerts so unmatched payments were flagged instead of going unnoticed.
- Developed and optimised GraphQL APIs for internal and external financial services; improved reliability using Redis caching and background workers.
- Collaborated cross-functionally with product, finance, accounting and operations to deliver compliant financial workflows, explaining technical trade-offs to non-technical stakeholders.
- Handled production debugging and incident resolution in critical financial systems; reviewed code and mentored engineers on payment-critical paths.

Node.js · TypeScript · PostgreSQL · GraphQL · Kafka · Redis · Docker · AWS · Datadog · Stripe · Airwallex · NetSuite

Software Engineer | Deutics Global

Oct 2022 – Oct 2023

- Full-stack development on live production projects serving thousands of concurrent users, using Node.js, Express, React and MongoDB.
- Built and integrated REST APIs and payment gateways; handled input validation and authentication.
- Deployed services on AWS EC2 with CI/CD pipelines, AWS Amplify and NGINX.
- Led internal knowledge-sharing and training on backend best practices and scalability.

Node.js · Express · React · MongoDB · AWS (EC2, Amplify) · NGINX · CI/CD

EDUCATION

B.S. Information Technology — University of the Punjab

Oct 2019 – Oct 2023

SKILLS

- **Backend**: Node.js | TypeScript | JavaScript | Express | REST APIs | GraphQL | Kafka | Redis | Microservices | Queue-Based Systems | Event-Driven Architecture | OOP & Design Patterns
- **Databases**: PostgreSQL | SQL | Query Optimisation | Data Migrations | Database Modelling | MongoDB
- **Scale & Reliability**: High Transaction Volume | Concurrency | Idempotency | Retries | Performance Under Load | Scalability | High Availability | Observability (Datadog) | Production Debugging
- **Payments & Fintech**: Stripe | Airwallex | NetSuite | Webhooks | Reconciliation | Multi-currency & Settlement | Financial Data Consistency
- **APIs, Cloud & DevOps**: API Design | Input Validation | JWT Tokens | Authentication | AWS (EC2, Amplify) | Docker | CI/CD | NGINX | SaaS (24/7 production)
- **Frontend**: React.js | React Native | Redux
- **AI-Assisted Development**: Daily AI coding workflow | Context Files | Custom Skills | Subagents | MCP Servers | Reviewing AI-Generated Code
- **Ways of Working**: Remote-first | Asynchronous Collaboration | Cross-functional Delivery | Code Review | Mentoring
