SUMMARY

Backend engineer with 4 years building production systems in Node.js, TypeScript and PostgreSQL. At Nivoda I owned payments end to end (Stripe, Airwallex and NetSuite) for a B2B marketplace processing 20,000+ payments a week across 10+ currencies, and built the reconciliation engine that replaced a fully manual process. Currently the sole engineer on internal tools for a US insurance company, on Next.js and Azure.

OWNERSHIP

- **Sole engineer and decision-maker** on a US insurer's RFP and quoting platform: own product scoping, system design and stack choices, and demo each milestone on schedule.
- **Owned payment processing end to end at Nivoda** (1,000+ Stripe payments a day): production support for real retailers, validation of live payments, and mentoring engineers on payment code.
- **Built payment observability from scratch:** Datadog monitoring, Slack alerts and status dashboards.

EXPERIENCE

Software Engineer (Contract) · RFP & Quoting Platform

Jul 2026 – Present

US insurance company, through an engineering partner · sole engineer · remote

- **Designed and built the platform from scratch:** it turns RFPs and quote requests arriving by email into tracked work with clear dashboards. Rollout to external brokers is next.
- **Saved each user 2–3 hours of manual work a day** by automating the email-driven RFP and quoting workflow, now used daily by 200–300 people.
- **Made every engineering call:** Next.js for server-side rendering, a PostgreSQL schema I designed with Prisma, background queues for slow work, and Entra ID sign-in on Azure.
- **Kept quality high with ~90% test coverage**, including end-to-end tests on the core flows, building every feature through a spec-driven AI workflow.

Next.js · TypeScript · PostgreSQL · Prisma · Queues · Azure · Microsoft Entra ID · CI/CD

Software Engineer II · Nivoda

Nov 2023 – May 2026

B2B diamond and gemstone marketplace serving 10,000+ retailers in 70+ countries.

- **Built automated reconciliation from scratch**, replacing a manual process. Version 2 matched one payment to several invoices and handled partials, automating 70–80% and saving the AR team 2–3 hours a day.
- **Owned Stripe, Airwallex and NetSuite integrations end to end:** webhook idempotency, retries, partial refunds, multi-currency settlement, and diagnosing failed payments with customers.
- **Moved payment processing out of the monolith** into an event-driven Kafka service, so a slow or failing provider no longer held up orders and invoices, and payments scaled on their own.
- **Rolled out Stripe in the UAE and Saudi Arabia** with region-specific payment methods, scaled ahead of launch.
- **Built the NetSuite accounting sync** that records each payment and marks its invoice paid before updating our database, so finance's books matched ours and every failed sync was flagged.
- **Designed PostgreSQL schemas and GraphQL APIs** for financial data (invoices, payments, balances, callbacks), with Redis caching, query tuning and zero-downtime migrations.

Node.js · TypeScript · PostgreSQL · GraphQL · Kafka · Redis · Datadog · Stripe · Airwallex · NetSuite

Software Engineer · Deutics Global Oct 2022 – Oct 2023

- **Built full-stack features** for live products with thousands of concurrent users.
- **Built REST APIs and payment gateway integrations**, deployed on AWS with CI/CD and NGINX.

Node.js · Express · React · MongoDB · AWS (EC2, Amplify) · NGINX · CI/CD

AI-FIRST ENGINEERING

I direct AI coding agents through a structured, spec-driven workflow, so the AI works from the full picture of the codebase and every feature follows the same steps.

- **Context folder in every repo:** a detailed spec file per feature, an AI-interactions log and defined coding standards, wired into `CLAUDE.md` for Claude Code and `AGENTS.md` for Codex.
- **Repeatable feature lifecycle:** `feature load` brings the spec into context; `feature start` opens a branch, breaks the work into to-dos and runs the tests; `feature complete` closes it out.
- **Deliberate context management:** keep context windows focused and within token budget, so the agent understands the whole codebase rather than one prompt at a time.
- **Custom agents:** built task-specific agents, including UI optimisation checks and security review.

Claude Code · Codex · Cursor · CLAUDE.md · AGENTS.md

SKILLS

BACKEND	TypeScript, Node.js, Express, Next.js, REST, GraphQL, Kafka, Redis, queues
DATA	PostgreSQL (schema design, query tuning, zero-downtime migrations), Prisma, MongoDB
PAYMENTS	Stripe, Airwallex, NetSuite, webhooks, idempotency, reconciliation, multi-currency
CLOUD & OPS	Azure, Entra ID, AWS, Docker, CI/CD, Datadog, NGINX
QUALITY	End-to-end testing (~90% coverage), code review
FRONTEND	React, Next.js, Redux

EDUCATION

B.S. Information Technology · University of the Punjab 2019 – 2023

COURSES

Coding With AI - Planning To Production · Brad Traversy, Udemy In progress
